CREATOR VIDEO PLAYBOOK

Developers trust what they can **check.** So show them **the check.**

6 shots for a sponsor video developers can verify.

THE STAKES

48%

of developers trust AI when they can **easily check** the answer.

Just **16%** would trust it with most tasks that aren't big work decisions.

Source: Stack Overflow 2026 Developer Survey, AI section, Oct 2026.

SHOT 01 OF 06

Use a **real repo,** not a toy app.

A to-do app proves nothing. Ask the creator to run it on a project their audience already knows.

SHOT 02 OF 06

Put the **prompt** on screen.

If viewers can't read what went in, they can't judge what came out.

SHOT 03 OF 06

Run it **live.** No cut at the result.

A jump cut right before the answer makes people wonder what you cut.

SHOT 04 OF 06

Show the **diff.**

What changed, line by line. That's the receipt developers look for.

SHOT 05 OF 06

Let it **miss once.**

One honest stumble, then the fix. It shows the tool is real, and the fix shows it's useful.

SHOT 06 OF 06

Let the creator say what they'd **still check** by hand.

It tells viewers the creator is on their side, not yours.

THE TAKEAWAY

Developers don't need a better pitch. They need **something to check.**

YOUR NEXT STEP

Want creators who already **show their work?**
